

Mobile application « Dans ta Chasse »
(in English « in your hunt »)

Confidential document
any kind of plagiarism or copy may be prosecuted

Background

“Dans ta Chasse” is a native French application (no website associated), developed in both French and English languages for IOS and Android. At the time of its launching, it’s dedicated to France, but in the long term, the system must be operational in all countries. The idea behind the application is to allow anyone to report a selection of troubles/concerns related to hunting practices, like for instance poaching, abandoned dogs or left behind sockets. It must be very easy to use, user-friendly and include geolocation data.

Main features

For unregistered users, the app looks like a map including all the reports done by registered users, appearing as dots. The app allows searching “around me” or by location.

Any new user who wants to post reports must start by creating a personal account and verify at least a phone number or an email address. For security reasons, all users must choose a pseudo (user ID) different from their real names.

1. Registered users must be able to contact the admins
2. Registered users must be able to contribute (donate), using a simple button which would direct to a stripe account or a crowdfunding platform

Note* **We need the App to be perfect.**

Functions

The app allows all registered users to report troubles related to hunting practices.

Every report includes at least: category, 1 picture, date, location, action and user ID.

The App MUST include a filter which prevents uploading pictures showing human faces or vehicle plates numbers.

We have 4 different categories: accidents, waste, incivilities and dogs.

Each category has a color code, for example accidents in red, waste in blue etc.

Each category has subcategories (12 in total – 4 for accidents – 3 for waste – 3 for incivilities - 2 for dogs).

Each subcategory has a color related to the main category color, for example accidents involving people will be dark red, accidents involving pets will be pale red, etc.

Reports

Any user who would like to report something needs to connect on his personal account and fill a form, uploading the requested information and a picture (only one). Depending on the category, the system may ask 1 supplementary question, for instance: in the Waste category, the system will ask the user if he collected the waste; in the accidents category, the system will ask the user if he was a witness or a victim, etc.

Then, before submitting, a warning window appears and he must tick 3 boxes to confirm information.
